TITLE : HOLDER FOR PORTABLE TELEPHONE SET

ABSTRACT : PROBLEM TO BE SOLVED: To easily use and hold a portable telephone set and to substantially avoid an often encountered inconvenience that the response to an incoming call is made so late that the call is disconnected.

SOLUTION: This holder is composed of a pair of joining means 5a and 5b which are freely attachable and detachable to/from each other by magnetic force, the joining means 5a being mounted on the side of the portable telephone set 1 and the other joining means 5b being arranged at the locking point of the portable telephone set 1. Thus, in this holder, when the joining means 5a is brought closer to the joining means 5b at the locking point, both joining means 5a and 5b are magnetically attached by magnetic force and the portable telephone set 1 is fixed at the locking point by the force. Also, since the joining means 5a and 5b are just magnetically attached to each other, the portable telephone set 1 is easily detached from the locking point by simply pulling it.
